

AKI PrinTaurus Security Suite Services

Printing infrastructure offering the highest level of security

aki.de

Printing infrastructure offering the highest level of security with the AKI PrinTaurus Security Suite

Manage the security settings of printers and multifunction devices and ensure that they comply with company policies at all times.

The printers and multifunction devices meet the highest security standards. This is ensured by the AKI PrinTaurus Security Suite, which successfully defends against attacks on the printing infrastructure. The AKI PrinTaurus Security Suite regularly monitors the settings of your device fleet in accordance with security guidelines, and should any deviations occur, the specified settings are automatically reapplied to the devices. Checks on security settings and any deviations from them are logged, so that a report on the security of your printing infrastructure is available at any time.

The NIS2 Directive imposes stringent requirements on organisations' IT security. It calls for systematic risk management, transparent IT structures and verifiable technical and organisational measures. Furthermore, NIS2 requires clear transparency regarding IT assets and their security status. In view of the expanded management responsibilities under NIS2, the AKI PrinTaurus Security Suite helps organisations to demonstrably fulfil their organisational due diligence obligations and reduce business and liability risks. Documented, reproducible security policies enable better preparation for security incidents and ensure the necessary auditability and verifiability for regulatory authorities. This makes IT security a manageable, transparent and sustainable component of corporate governance.

The AKI PrinTaurus Security Suite simplifies the IT administration of printing systems and ensures compliance with security and regulatory requirements.

This is what the AKI PrinTaurus Security Suite offers

- + Definition of policies for the security settings of printing systems
- + The security-related settings of the printing systems are checked at specified intervals and automatically corrected
- + Dashboard providing an overview of the security status of the printing systems
- + Generation of reports on the checking and correction of settings Distribution of device certificates

The AKI PrinTaurus Security Suite is available as

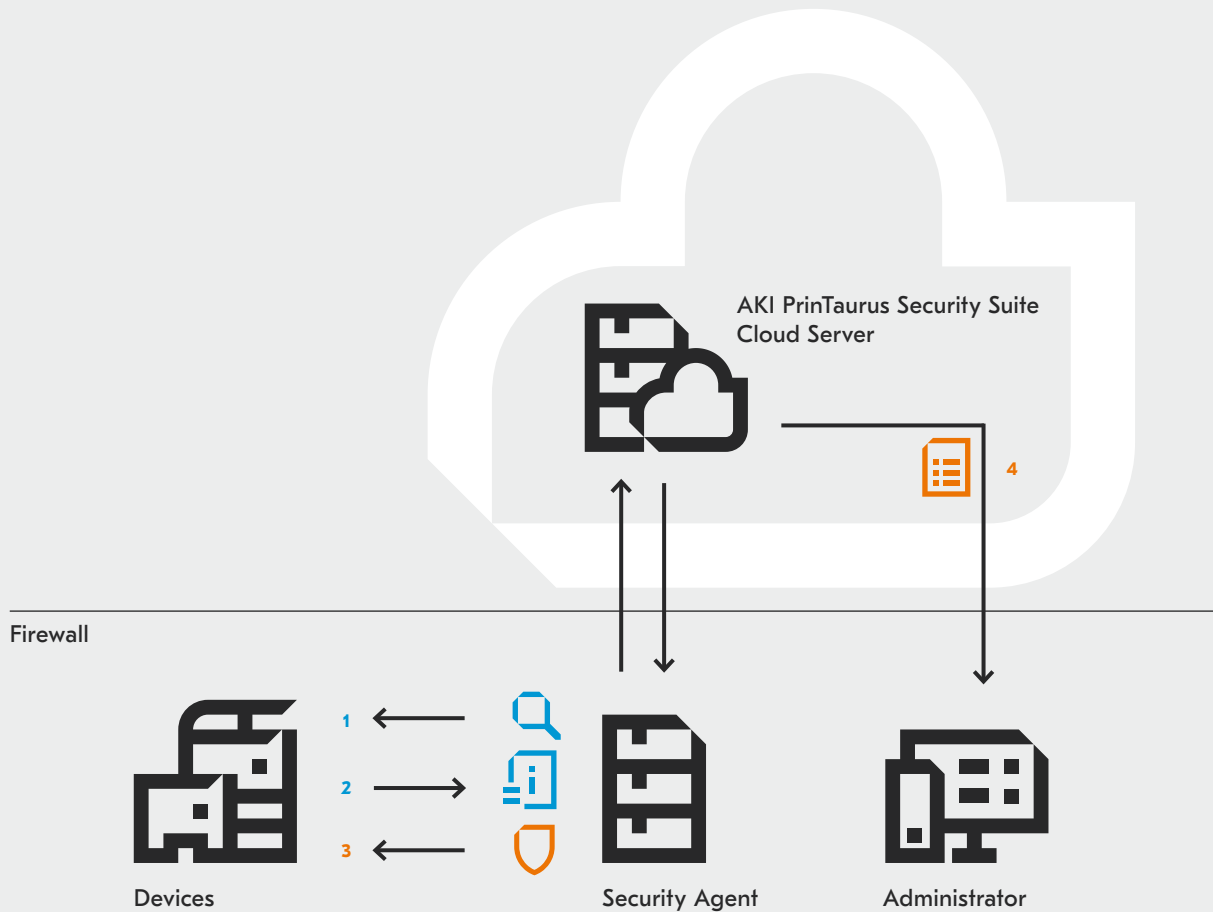

Cloud version: A multi-tenant solution for managing the security settings of printing systems via the internet.

On-premises version: A local installation for managing the security settings of printing systems within the company network. (Available from Q4 2026)

This is how the AKI PrinTaurus Security Suite works

1. Scan the network to find devices
2. Retrieving device settings
3. Transfer preset settings to devices
4. Protocol for the IT administrator regarding regular checks of settings and corrections made
